was under construction.

16.

und su ust 1049:

5 August 1949 50X1-HUM GROSSERHAIN airfield (N 52/A 01): Construction of two runways; fuel tena installations under construction at the northern border of the landing field. 4 4u ust 1949 And garages for tank trucks. Construction of earth bunkers and garages for tank trucks. store e of fuel burrels. 29 June 1949 20 July 1949 LEIPZI 3-NOCKAU airficle (N 2 E 21): Repair work on the landing 28 July and 9 Aurust 1949 on the landing field. (H 50/E 91): Clearing and leveling works δ 23 July 194. NEOBEANDENEURG airfield (N 54/U 66): Continuation of the recon-.0. Struction and enlargment of the landing field. Completion of this work alle edly scheduled by 1 September 1949. 20 July 1949 PARCHET airfield (1784/1744): Leveling work at landing field and runway nearly condicted. A taxiway is under construction along the western northern and eastern sides of the landing field. 11. 25 July 1360 PELES UM DE sirfició (N 55/P 33): A construction work going 12. on since 1 July 1949. 14 July 1949 STHAUSBLAG sirfield (# 53/1/15): Clearing and leveling work on 23. the western and northwestern parts of the landin field. The layin; of an under round caule was observed at the western border of the landin field. 5 marust 1.40 TARGETTZ airfield (1.4/0.30): Eight hundred tons of cement for construction work at the airfield are alleged y scheduled for delivery to the field. The be inning of the construction work had not yet been reported. 28 July 1949 AbitChat airfield (S 51/a 34): heconstruction work at the landing 15. Mele completed.

CONFIDENTIAL CONTROL /US OFFICIALS OFFI

No reports on the followin airficies have been received for July

50X1-HUM

CLEIFSTAID-WIESK (N 55/P 72) BUNG (M 55/Y 81; FLANTAPUNT/Oder (O 53/V 63) HALBOASTAIT (F 52/P 26).

Reports on the airficlds of JENA-ROELLER, WELZOW, COTTEUS and DRESDER covering the months of July and August do not furnish any indications that construction work was under way at these fields.

- 17. On the whole, the following type construction was observed:
 - a. Neco struction of war-damaged landing fields and runways:
 - b. Clearing of landing flelos of cobris and scrap;
 - c. Intension of runways (LLSshi airfield);
 - d. Construction of new runways.

(Details on the nature of construction work observed were currently reported in air reports//

AS. Target dates for the completion of the construction work at the various airfields have become known for only the followin fileness:

MEUBRANDERBUrd:

About 21 September 1949

About 21 Auly 1949 (the time 11 At was kept)

BESSAT:

about 21 July 1949.

A uniform target date for the construction work at all the airflates does not seem to have been fixed. From the nature and extent of construction work it is assumed that the projects will be completed by the full of 1949.

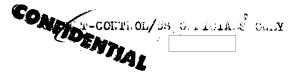

- 19. In the main, construction projects at airfields are being carried o t in three areas:
 - a. Senthern Lecklenburg (PARCHIM, ROLDLIN, NEURIMENTH), R CHLLI, LAR 2)
 - b. questerin area of the III Bur Corps: OhANIENBORD, FINON, ST. auSBELL
 - c. Listrict between Elbe and Saule divers including the ZEnBST and EBSEURA sirfle ds.

the majority of these sirifelds/for the sirfields of ZERBST, B.Andris, Charlebur, Finos, and STERESFERT are not yet occupled by an air unit.

- 20. Conclusions as to whether these construction projects are of a defensive or offensive nature carbot yet be made. With regard to their number and size, the airfields now available and used in the Soviet Lone of we made were adequate for the employment of the units of and aircraft types used in the Sizteenth Air Army. Therefore, the preparation of further airfields can only serve the following purposes:
 - a. Proparations for the transfer of additional air units from the SU_3
 - b. Establishment of a maximum number of alternate airfields for the forces now located in Mermany, possibly also for the formation of points of main effort.

Declassified in Part - Sanitized Copy Approved for Release 2012/01/03: CIA-RDP82-00457R003400580003-2

50X1-HUM

The accomplished expansions of airficide whose previous sizes and been accomplished expansions of airficide whose previous sizes and been accomplished for the take-off and landing of all types of aircraft stationed in the Soviet Zone of Germany (e.g., LESSAU) are possibly connected with an intended occupation by aircraft with longer take-off and landing runs. The improvement and reconstruction of the airfields located in the area of mecklenburg is particularly noteworthy. These airfields are distinguished because if their sizes and surroundin s, which are renerally free of obstacles, such as:

PARCHTO, length of runway 8,300 feet LABRZ, length of runway 8,000 feet and 6,300 feet REUBLANDENEUMG, length of runway 5,000 feet RECHAIN, dimensions of landing field 5,700 x 4,650 feet; no runway.

21. Late on the thickness of the runway extensions have only become known relative to the HESSAU airfield: concrete layer is eight inches thick, the gravel layer undernoath has a thickness of about five inches. The load capacity of the runway extension, the taxi strips, and of the hard shands is unknown.
